

FUNCTIONAL SKILLS TRAINING STUDY

Volunteers Needed for a Research Study

As people age, managing their health and performing common daily activities can be challenging for them. Many of these activities are becoming more cognitively demanding due to advances in technology.

The Center on Aging at the University of Miami Miller School of Medicine is conducting a research study to discover better ways to train older adults to perform daily activities.

Research participants will complete a set of technology-oriented tasks that represent common everyday activities. They will then be trained to complete these tasks at varying levels of difficulty.

Anybody who is 50+ years old and speaks English may be able to participate.

Study lasts about 1 month with a total of 6 visits.

Study requires 2 assessment sessions of 4-5 hour each, and 4 training sessions of 1 hour each.

If you complete all the sessions, you will receive \$160 of financial compensation.
